Test Plan Document – Hire Me Nepal Platform

Prepared By: Abinash Malla

Project: Hire Me Nepal

Document Version: 1.0

Status: Draft

1.Objective

The objective of this Plan is to define the testing strategy, scope, resources, schedule, and deliverables for the Hire Me Nepal platform. The goal is to ensure that the application is stable, secure, user- friendly and meets business and functional requirements for both job seekers and employers in Nepal.

This plan aims are:

- Validate end-to-end functionality of the job portal
- Ensure data accuracy, performance and security
- Deliver a high-quality, reliable platform to end users

2. Scope

The following modules and features will be tested:

Job Seeker Module

- User registration and login (email/mobile-based)
- Profile creation and updates
- Resume upload and management
- Job search, filtering and job application
- Application tracking
- Notifications (email/SMS/in-app)

Employer Module

- Employer registration and verification
- Company profile management
- Job posting and job management
- Candidate search and filtering
- Application review and shortlisting

- Employer notifications

Admin Module

- User and employer management
- Job moderation and approval
- Content and category management
- Reports and analytics

Common Features

- Authentication and authorization
- Payment gateway (if application)
- Localization (Nepal-specific data, currency, language)
- UI/UX and accessibility
- Security and performance

Out-of-Scope

- Third-party system internal testing (e.g., external payment provider logic)
- Marketing website content validation
- Hardware or network infrastructure testing

3. Test Approach

Testing Types

The following testing types will be performed:

- **Functional Testing** – Validate business requirements and workflows
- **Integration Testing** – Verify data flow between modules and external services
- **System Testing** – End-to-end testing of the complete application
- **Regression Testing** – Ensure new changes do not break existing features
- **UI/UX Testing** – Validate layout, responsiveness and usability
- **Performance Testing** – Basic load and responsiveness and usability
- **Security Testing** – Authentication, authorization, and data protection checks
- **Compatibility Testing** – Browser and device compatibility

Test Levels

- Smoke Testing
- System Testing
- User Acceptance Testing (UAT) support

Test Design Techniques

- Requirement - based testing
- Boundary value analysis
- Equivalence partitioning
- Exploratory testing

Defect Management

- Defects will be logged with severity and priority
- Re-testing and regression testing will follow defect fixes

4. Test Environment

Hardware and Devices

- Desktop/Laptop (Windows, macOS)
- Mobile devices (Android & iOS)

Software

- OS: Windows 10+, Android, macOS, iOS
- Browsers: Firebox, Chrome, Edge, Safari

Test Environment Setup

- Dedicated QA/Staging environment
- Test database with anonymized data
- Email/SMS sandbox account

Tools

- Test Case Management: Excel / TestRail / Jira
- Bug Tracking: Jira / Azure Dev
- Screenshot and Screen Recording Tools

5. Test Deliverables

5.1 Test Cases

- Detailed test cases covering all modules
- Includes preconditions, test steps, expected and actual results
- Traceability with requirements

5.2 Bug Report (with Screenshots)

Each defect report will include:

- Defect ID
- Title and description
- Steps to reproduce
- Expected vs actual result
- Severity and priority
- Environment details

5.3 Test Summary Report

The report will include:

- Test execution summary
- Total test cases executed
- Passed / Failed / Blocked counts
- Defect statistics
- Overall quality assessment
- Release recommendation

6. Risks and Assumptions

Risks

- Requirement changes during testing phase
- Third-party service downtime (SMS, payment, email)
- Limited test data availability
- Tight release timelines

Mitigation

- Early involvement in requirement reviews
- Buffer time for regression
- Mock or sandbox third-party services

Assumptions

- Requirements are clear, approved and stable
- Test environment closely matches production
- Development team provides timely bug fixes

7. Status

Testing status will be tracked and reported regularly:

- **Daily Status Reports –** Test progress, blockers, and risks
- **Test Execution Status –** Planned vs executed test cases
- **Defect Status –** Open, Fixed, Retested, Closed

Final sign-off will be provided after:

- All critical and high-severity defects are resolved
- Test summary report is reviewed and approved
- Stakeholder approval is received
